

FINAL FUNDRAISING PITCH • 8 MINUTES

CareerCloset

Professional clothing should open doors, not close wallets.

A campus-based rental pilot for interviews and career events

Funding decision: \$15,000 to prove one repeatable, paid campus pilot.

Career opportunities have a dress code. Access to the clothes is uneven.

Customer hypothesis

Students preparing for interviews, career fairs, and presentations need professional clothing without buying a full wardrobe.

Evidence boundary

This package contains no CareerCloset interviews, paid rentals, or measured demand. The need is a hypothesis, not traction.

First evidence target: 30 student interviews that test event frequency, current alternatives, fit needs, and willingness to pay.

Reserve an outfit for the event, then return it nearby.

1 Choose size + event

Interview, fair, presentation

2 Reserve online

See available outfit bundles

3 Pick up + return

Scheduled campus windows

Pilot operations: curated inventory, documented condition at pickup, deposit/card authorization, cleaning, and tracked return windows.

Start with one campus and one trusted distribution partner.

Beachhead

One assumed 10,000-student campus with recurring interview and career-fair demand.

Reach

Career center first; student organizations and employer partners extend the pilot.

What we need to learn

Which sizes turn, what students will pay, whether fit works, and whether returns are reliable.

Campus size and channel access are planning assumptions, not sourced market measurements or confirmed partnerships.

One rental has a simple, testable contribution equation.

Rental price \$29 assumption / event	Cleaning + handling −\$8 assumption / rental	Contribution \$21 \$29 − \$8, before fixed costs	Semester membership \$79 assumption; not validated
---	---	---	---

Potential sponsor revenue is uncommitted. The pilot must measure actual price acceptance, cleaning cost, damage, utilization, and repeat use.

The ask is \$15,000 for a six-month validation round.

Instrument SAFE proposed, unsigned	Post-money cap \$135,000 classroom assumption	Illustrative ownership 10% $\\$15k \div (\\$135k + \\$15k)$
---	--	---

No investor commitment, legal document, or independent valuation exists. Terms are a proposal for discussion, not financial or legal advice.

Every dollar is assigned to a pilot job.

Curated initial inventory • 40%	\$6,000
Cleaning + alteration setup • 13.3%	\$2,000
Campus pilot + acquisition • 26.7%	\$4,000
Software, support + contingency • 20%	\$3,000

Total: \$6,000 + \$2,000 + \$4,000 + \$3,000 = \$15,000. Allocation is a planning budget, not spend to date.

The round buys six months, not indefinite operating time.

Pre-financing cash \$0 assumption	New financing \$15,000 proposed ask	Average net burn \$2,500/mo planning assumption	Runway 6 months $\\$15,000 \div \\$2,500$
---	---	---	---

Illustrative ending cash: M1 \$12,500 · M2 \$10,000 · M3 \$7,500 · M4 \$5,000 · M5 \$2,500 · M6 \$0. Assumes even monthly net burn and no unplanned costs.

At month six, decide with operating evidence.

30

student interviews

75

completed pilot rentals

1

paid campus or sponsor

80%

on-time return target

Expand only with positive rental contribution, at least 85% fit satisfaction, and the on-time-return target. Otherwise pause inventory growth and fix or stop the model.

We are financing the risks that the pilot can actually resolve.

Operating risks

Fit gaps, low utilization, damage, late returns, and cleaning cost can erase the assumed \$21 contribution.

Why this financing

Debt needs predictable cash flow; a larger equity raise is premature. A small proposed SAFE funds a bounded test with explicit stop/go gates.

Controls to test: deposits or card authorization, condition records, short rental windows, and return reminders.

Our objective is affordable access, earned through disciplined proof.

Fund one campus. Measure every rental. Expand only when access and unit economics both work.

We are asking for \$15,000 to turn a promising customer hypothesis into a paid, measurable campus pilot.

Founder objective stated for this pitch; confirm wording with the full team before presenting.

Questions

Returns + damage

How will deposits, condition checks, late fees, and cleaning affect contribution?

Demand + fit

What result would make you pause rather than buy more inventory?

Answer with the current assumption, the measurement plan, and the relevant month-six gate. Do not present targets as results.
